## Our Result

Input: graph G rotation system R<br>Question: Does G have a Lombardi drawing respecting R?

[^0]
## Our Result

| Input: | graph G <br> rotation system $R$ |
| :--- | :--- |

Question: Does G have a Lombardi drawing respecting R?

## Theorem:

It is $\exists \mathbb{R}$-complete to decide whether $G$ has a Lombardi drawing respecting $R$.

$$
N P \subseteq \exists \mathbb{R} \subseteq \mathrm{PSPACE}
$$

[^1]Paul Jungeblut

## Our Result

Input:

## graph G

rotation system R
Question: Does G have a Lombardi drawing respecting $R$ ?

## Theorem:

It is $\exists \mathbb{R}$-complete to decide whether $G$ has a Lombardi drawing respecting $R$.

$$
N P \subseteq \exists \mathbb{R} \subseteq \mathrm{PSPACE}
$$

## Complexity Class $\exists \mathbb{R}$

- appears frequently in computational geometry and graph drawing
- difficulty = solving polynomial system of equations and inequalities
- Formally: reducible to

## Related Work

## Lombardi Graph Drawing

GD 2010 introduced by Duncan, Eppstein, Goodrich, Kobourov and Nöllenburg

Always exist for 2-degenerate, trees, cacti, subcubic, outerpaths, ...

Variants planar, circular, ...
Complexity no general results yet

[^2]

## Stretchability

Input: pseudolines Want: lines in $\mathbb{R}^{2}$

## Simple Stretchability:

- every two pseudolines intersect exactly once
- no triple intersections

[^3]
## Stretchability

Input: pseudolines Want: lines in $\mathbb{R}^{2}$

## Simple Stretchability:

- every two pseudolines intersect exactly once
- no triple intersections

## Theorem:

(Mnëv 1988)
Simple Stretchability is $\exists \mathbb{R}$-complete in $\mathbb{R}^{2}$.

[^4]
## Stretchability

Input: pseudolines Want: lines in $\mathbb{R}^{2}$

## Simple Stretchability:

- every two pseudolines intersect exactly once
- no triple intersections

## Theorem:

(Mnëv 1988)
Simple Stretchability is $\exists \mathbb{R}$-complete in $\mathbb{R}^{2}$.

## Observation:

(Bieker, Bläsius, Dohse, Jungeblut 2023)
Simple Stretchability is $\exists \mathbb{R}$-complete in $\mathbb{H}^{2}$.

[^5]
## $\mathbb{H}^{2}$ - Hyperbolic Plane

- non-Euclidean geometry
- has already been used in the literature to construct Lombardi drawings

[^6]Paul Jungeblut

## $\mathbb{H}^{2}$ - Hyperbolic Plane

- non-Euclidean geometry
- has already been used in the literature to construct Lombardi drawings

## Poincaré Disk Model

- embeds $\mathbb{H}^{2}$ into $\mathbb{R}^{2}$
- $\mathbb{H}^{2}$ is mapped to the interior of a unit disk D
- hyperbolic lines $\leadsto$ circular arcs orthognal to D
- conformal: preserves angles

[^7]

## Stretchable $\leadsto$ Lombardi

## Recall:

$A$ is stretchable in $\mathbb{R}^{2}$
$A$ is stretchable in $\mathbb{H}^{2}$

## Construct Lombardi Drawing:

- take realization of $A$ in the Poincaré disk

[^13]
## Stretchable $\sim$ Lombardi

## Recall:

$A$ is stretchable in $\mathbb{R}^{2}$ $\Longleftrightarrow$
$A$ is stretchable in $\mathbb{H}^{2}$

## Construct Lombardi Drawing:

- take realization of $A$ in the Poincaré disk
- extend circular arcs to circles

[^14]
## Stretchable $\sim$ Lombardi

## Recall:

$A$ is stretchable in $\mathbb{R}^{2}$ $\Longleftrightarrow$
$A$ is stretchable in $\mathbb{H}^{2}$

## Construct Lombardi Drawing:

- take realization of $A$ in the Poincaré disk
- extend circular arcs to circles
- add circles around intersections

[^15] Paul Jungeblut

## Lombardi $\leadsto$ Stretchable

Problem: A Lombardi drawing of G might not look like a Poincaré disk with hyperbolic lines.

## Lombardi $\sim$ Stretchable

Problem: A Lombardi drawing of G might not look like a Poincaré disk with hyperbolic lines.

Solution: Circle gadgets that force cycles in $G$ to be drawn as circles.

## Lombardi $\leadsto$ Stretchable

Problem: A Lombardi drawing of G might not look like a Poincaré disk with hyperbolic lines.

Solution: Circle gadgets that force cycles in $G$ to be drawn as circles.

## Extract line arragnement:

- interpret as Poincaré disk
- little circles $\leadsto$ same order of intersectoins
$\Rightarrow A$ is stretchable

## Circle Gadget

Given: cycle C, 4-regular

9 On the Complexity of Lombardi Graph Drawing
Paul Jungeblut

## Circle Gadget

Given: cycle C, 4-regular

- add fan of additional edges

9 On the Complexity of Lombardi Graph Drawing
Paul Jungeblut

## Circle Gadget

## Given: cycle C, 4-regular

- add fan of additional edges
- add leaves to "fix" angles

9 On the Complexity of Lombardi Graph Drawing
Paul Jungeblut

## Circle Gadget

Given: cycle C, 4-regular

- add fan of additional edges
- add leaves to "fix" angles

9 On the Complexity of Lombardi Graph Drawing Paul Jungeblut

## Circle Gadget

## Given: cycle C, 4-regular

- add fan of additional edges
- add leaves to "fix" angles

## Lemma:

C must be drawn as a circle.

Idea: perfect angular resolution + fixed rotation system $R$
$\Rightarrow$ all angles are known
$\Rightarrow$ characterization of arc-polygons (Eppstein, Frishberg, Osegueda 2023)
$\Rightarrow$ C must be drawn as a circle

## Open Problems

## Problem 1:

Planar Lombardi drawings:

additional crossings are caused by circle gadgets

## Open Problems

## Problem 1:

Planar Lombardi drawings:

additional crossings are caused by circle gadgets

## Problem 2:

Without fixed rotation system?

What are the angles between the edges?
