

Errata to Introduction to yFiles

- Node-/EdgeMap
- CanonicMultiStageLayouter

Last update: 27-04-2004

Node-/EdgeMap

- can only hold **one** value per Node-/EdgeMap
- unused maps should be removed via

```
G.disposeNodeMap ( nameOfNodeMap );  
G.disposeEdgeMap ( nameOfEdgeMap );
```

where G is the graph that provide the maps

CanonicalMultiStageLayouter

- the testing method `canLayoutCore` is not invoked automatically
- to ensure requested properties, one should add

```
if ( ! canLayoutCore(G) ){  
    throw new WrongGraphStructure( " ... " );  
}
```

at the beginning of `doLayoutCore`.
