

$G$  Vergleichbarkeitsgraph

$\exists$  transitive Orientierung  $F$

$\exists$  transitive topologische Sortierung  $\sigma$

$\exists$  Poset  $P$   
(partially ordered set)

---

**Eingabe** : Vergleichbarkeitsgraph  $G = (V, E)$ .

**Ausgabe** : Knotenfärbung  $h$  und Clique  $C$ .

---

```
1 Bestimme transitive Orientierung  $F$  von  $G$ ;  
2 Bestimme topologische Sortierung  $\sigma$  von  $(V, F)$ ;  
3 für  $i \leftarrow 1$  bis  $n$  tue  
4   |  $v \leftarrow \sigma(i)$ ;  
5   |  $h(v) \leftarrow 1 + \max\{h(w) \mid wv \in F\}$ ;  
6   |  $\chi \leftarrow \max\{\chi, h(v)\}$ ;  
7   |  $w \leftarrow \operatorname{argmax}\{h(w), h(v)\}$ ;  
8 Ende  
9 für  $i \leftarrow \chi$  bis  $1$  tue  
10  |  $C \leftarrow C + \{w\}$   
11  |  $w \leftarrow \operatorname{argmax}\{h(v) \mid vw \in F\}$ ;  
12 Ende  
13 Gebe  $h$  und  $C$  aus;
```

---

**Algorithmus 8** : Bestimmung von  $\chi(G)$  und  $\omega(G)$

---

$G = (V, F)$  transitiv

$B = (V' + V'', E)$  bipartit

$$V' = \{v' \mid v \in V\}$$

$$V'' = \{v'' \mid v \in V\}$$

$$vw \in F \iff v'w'' \in E$$

Cliquenüberdeckung

Matching

$v, w$  aufeinanderfolgend

$v'w'' \in M$

$G = (V, F)$  transitiv

$B = (V' + V'', E)$  bipartit

$$V' = \{v' \mid v \in V\}$$

$$V'' = \{v'' \mid v \in V\}$$

 $S$

**Eigenschaft  $V$ :**  $G$  ist ein Vergleichbarkeitsgraph.

**Eigenschaft  $\bar{V}$ :**  $\bar{G}$  ist ein Vergleichbarkeitsgraph.

**Eigenschaft  $C$ :**  $G$  ist chordal.

**Eigenschaft  $\bar{C}$ :**  $\bar{G}$  ist chordal.
